

7. Semicrystalline polymers

7.1 Structure and general properties of semicrystalline polymers

Conformation and morphology

different structural elements and structural levels from molecular, nanoscopic, micro- to macroscopic

crystal structure, conformation	structure of the crystalline lamellae	arrangement of lamellae	structure of spherulites	size, form, and arrangement of spherulites	macroscopic/processing-related structures
 diffraction diagram	 3-phase structure of lamellae and TEM-image of lamellar structures	 TEM: spatial arrangement of lamellar structures 	 single spherulite with band structure fine structure of a spherulite 	 spherulitic texture in the LiMi (upper) and in the SEM (lower image) 	 e.g., skin-core morphology in injection-moulded products
